PROBLEM

At the moment, global economy is going through one of the most difficult periods in the past few decades. The coronavirus pandemic and related quarantine restrictions have led to economic stagnation and job cuts all over the world. All this makes people to look for additional sources of income. Against the background of the negative trend of companies from the real sector, the positive dynamics of various online services and platforms looks attractive for investing. This is the reason for such an active interest in investments in online platforms.

Demand breeds supply. Therefore, the presence of a steady interest in investment products has created a lot of proposals from various kinds of fintech startups. Despite the strict control in the field of investments, most of these startups do not have established business cases. Some declare their plans to receive super-profits from venture capital investments, others position themselves as innovators, calling to invest in high-tech know-how, and others are apparent or veiled Ponzi schemes.

IDEA

XX Platform is designed for investors who want to find a compromise between reliable placement and high return on investment. Our goal is to create a platform that will be able to minimize risks while maintaining investment attractiveness.

The XX Platform team has established itself ambitious plans to create an independent investment platform that will become a reliable guide for investors in the world of finance.

SOLUTION

XX Platform is a system that combines a multifunctional cabinet with investment elements with a set of analytical tools and access to dozens of traders and trading robots.

Being developed in close cooperation and consultation with professional traders and investors, the platform provides maximum functionality while maintaining a simple and user-friendly interface.

The set of functions available to users includes:

- user account with investment elements
- multifunctional multicurrency crypto wallet
- investment calculator
- trading platform
- oracles of analytic data
- analytical services
- stock indicators and charts
- announcements
- financial news feeds
- economic calendar
- currency correction calculator
- comparison of broker spreads
- Forex time zone converter
- currency correlation calculator
- online charts for traders
- indicators of technical signals

XX Platform is not just another investment platform. This is an attempt to reimagine the concept of classic hedge funds, implementing it in the form of an automated investment trading platform.

The goal of the XX Platform team is: to make investment instruments available to everyone anywhere in the world.

TOKEN

Launching any fintech startup requires resources: time and money. We understand that the independent development of the XX Platform will take many years till its release. That is why our team decided to raise funds from private investors. In order not to contradict with our concept of decentralization and libertarianism, we turned down proposals from large investment funds in favor of attracting funds from private investors.

The team has decided to issue their own cryptocurrency – the **XX Platform** token (stock ticker: XXP).

XX Platform cryptocurrency technical characteristics:

Type: token;

Emission: 50 000 000 tokens.

Blockchain: Tron;

Token standart: TRC-20;

Stock ticker: XXP;

INITIAL DISTRIBUTION

The total emission of XXP cryptocurrency is 50,000,000 tokens, which are distributed on 6 special system wallets, each of which has its own purpose excluding their irrational or inappropriate use.

72% or 36 000 000 XXP tokens are intended to pay rewards to investors for helping in financing the platform development, implemented in the form of a staking interest rate;

10% or 5 000 000 XXP tokens – fund of the development team, is in a frozen state;

9% or 4 500 000 XXP tokens – main operational wallet to pay the expenses for the project functioning and promotion;

4% or 2 000 000 XXP tokens - pre-ICO and ICO stage.

4% or 2 000 000 XXP tokens - marketing fund for promoting and scaling the project.

1% or 500 000 XXP tokens - fund for holding promotions, bounty companies, contests, quizzes and other events.

TOKENOMICS

The formation system of the XXP token pricing policy is based on its use within the XX Platform as a native token. It is the XXP token that allows to create proper microeconomics inside the platform and ensure the ease and convenience of interaction for all system users.

The main objective of the XXP token is the functioning of a virtual accounting unit (equivalent to records in accounting books) to ensure the accounting of funds placed by investors in trust with traders.

Moreover, the XXP token provides its holders with the opportunity to receive a reward for helping to finance the platform development in the form of a staking interest rate.

In the future, the XXP token will also be used for investments in partnership funds and various investment products of the XX Platform ecosystem.

Holders of the XXP token will receive priority for investment, as well as special conditions and discounts, which will make investments with the XXP token more profitable, thereby providing it with natural liquidity.

PLAFORM

XX Platform is a combined IT product that combines an automated trading platform with a investment system. Such a solution makes the participation in the XX Platform financing economically profitable and attractive for investors.

Being a online platform, XX Platform presents a service where all operations are open and transparent, and the data is recorded in the blockchain and publicly available.

Users will be able to monitor the work of traders in real time, study the statistics of transactions and receive all the necessary information about the traders' profit. Furthermore, users will gain access to charts, graphs of various dependencies, summary tables and much more. Access to this kind of data will allow to visually study the patterns that affect the results and draw objective conclusions about a particular trading strategy of a particular trader.

This functionality will be implemented after the trading platform launch in 2022-2023.

Until the launch of the trading platform, XX Platform will function as an investment platform for fundraising at the stages of early financing and distribution of rewards from the platform.

Investors in XX Platform will be rewarded for help in financing the development of the platform in the form of a staking interest rate.

A more detailed calculation of the profitability of investments can be obtained by means of the investment calculator integrated into the personal account.

INVESTMENT INSURANCE

XX Platform offers its early investors an unparalleled service on the market – Investment insurance. When making a purchase of XXP tokens, investors are offered the opportunity to insure their investments. The insurance coverage is 100% and the payment is only 3%.

For example, if you invest \$10,000, the insurance premium will be 3% of the transaction amount, which equals \$300. Registration of investment insurance gives the investor the right for the buy-back of XXP tokens at any time within six months.

HALVING

In terms of the economic model efficiency, the XXP token implements the halving mechanism, which the developers have put into the XX Platform cryptocurrency at the software level.

The essence of halving lies in the following: starting from the 4th month after the launch of the network, a gradual decrease in the percentage of reward (staking) is activated, which will constitute -50% of the initial indicators by the end of the year.

Further, over the next 2 years, the percentage of remuneration (staking) will continue to decrease gradually and steadily and, as a result, will decrease by -50% every year.

Starting from the 4th year, halving will be automatically deactivated, until the moment when the emission of cryptocurrency will be completed with the production of 50 million tokens.

HELIX

In contrast to the above HALVING mechanism, the developers, at the software level, have implemented a deflationary algorithm in the system, called HELIX.

HELIX will be automatically activated by the system in Q1 of 2022, and its activity will be aimed at compensating for the decrease in profitability of XXP token staking. This mechanism is an additional investment tool that will appear in the interface of the user personal account. HELIX got its name because of the coefficient increasing in an upward spiral.

Thus, after the HELIX algorithm activation, XXP token staking will continue to be liquid and profitable for XX Platform investors.

XX DELEGATE

To structure and regulate the attracted investment funds, as well as for the sake of fair and transparent distribution of remuneration from the platform, the XX Delegate system of delegated stake distribution has been implemented in XX Platform.

The **XX Delegate system** consists of Delegates and Stakeholders.

This is an effective and democratic mechanism representing a voting system in which small and medium token holders (stakeholders) transfer their “vote” to the elected Delegates.

The process of placing user tokens in the Delegate's staking pool is conventionally called a vote transfer.

DELEGATES

A delegate is a user who has fulfilled the necessary conditions and registered a Delegate's account in the system.

Any user who feels a leadership potential and has the time, desire and experience to develop the XX Platform community can become a delegate.

In order to create a Delegate account, it is necessary to buy and "freeze" XXP tokens in the amount of 10,000 units and go through a special registration procedure.

Freezing of XXP tokens is carried out through the special form in the user personal account.

When registering a Delegate, the system offers conclusion of a contract:

- Commission size: from 1% to 10%.
- Contract duration: 12 months.
- Automatic renewal: active.
- Deposit defrost: 33% every 12 months.
- Participation in conferences, meetups: yes.
- Participation in voting: yes.

Freezing of funds when creating a Delegate's account confirms the seriousness of intentions, protects against spam and improves the functioning of the platform.

STAKING PULL

After the Delegate's account registration, the system automatically creates a Staking Pull of the same name, which is managed and controlled by the corresponding Delegate.

The staking pull is rewarded from the platform in proportion to its balance.

The delegate, being the creator of his staking pool, has the right to independently set the size of commissions on payments, the percentage of which can vary from 1% to 10%.

The size of the Delegate's commissions can be changed no more than once a quarter. Changes apply only to the newly voted users.

The reward received from the platform by the staking pool is proportionally distributed among those who have chosen this delegate, i.e. among the users who have voted.

The reward amount depends on several factors:

token balance

**token
storage time**

**Delegate's
commission amount**

PLATFORM COMISSION

To support and operate the XX Platform, the system deducts a commission of 1% from Delegates and Stakeholders by the payment of the reward (staking) interest. This money will be implemented for additional funding of the Team Special Fund and used to pay organizational and operational costs, as well as the payroll budget.

STAKEHOLDER

A stakeholder is a user registered in the system, who has XXP tokens on the balance and who has voted with them for any Delegate of his choice, represented on the platform.

In order to vote for a Delegate, you shall select the desired delegate from the list of those registered on the platform and click “vote”. During the voting, 44 XXP tokens will be “frozen” on the stakeholder's balance.

The tokens used by the stakeholder for “voting” remain in the ownership of the user, but are assigned to the corresponding staking pool for calculating the “weight” of the Delegate.

Frozen tokens continue to participate in staking.

In case if the user wants to independently withdraw his vote from the selected delegate, frozen tokens remain in the system. If the Delegate for some reason refused to renew his contract, 80% of the frozen tokens are returned to the stakeholders who voted for this Delegate.

BLOCKCHAIN

The choice of the Tron blockchain in launching the XXP token is conditioned by the number of factors:

- extensive functionality of the Tron Foundation ecosystem;
- presence of multifunctional smart contracts;
- ability to create Decentralized Applications (DApps);
- developed user infrastructure;
- a block in the TRON network takes 3 seconds;
- lowest transaction fee;
- increase in throughput capacity;
- improved scalability.

All this validates the choice of the Tron blockchain for launching the XXP token.

SCALABILITY

The XXP token is an TRC-20 token and uses the Ethereum blockchain for its operation. Accordingly, speaking about the technical characteristics of the XXP token, we mean the specification of the Ethereum network.

Today, network scalability indicators are:

- a block in the TRON network takes **3 seconds**
- more than **2000 nodes** in the network;
- advantages of the **dPoS** consensus mechanism.

These characteristics are more than enough for the stable and safe functioning of the XX Platform.

SECURITY

XX Platform network is a platform using advanced technologies resistant to cyber-attacks and hacking attempts, with a high level of security.

The algorithms used make the security system bypass almost impossible and hacking attempts – a high-cost and ineffective activity.

XXP cryptocurrency is an TRC-20 standard token functioning on the basis of the Tron blockchain. Tron, is one of the most reliable and popular technological solutions in the cryptocurrency industry today.

ROAD MAP

Q4 2020

- Marketing activities in social media and on crypto forums
- XXP token pre-ICO
- Start of token sales on the platform
- Alpha version of the investment platform
- XX Delegate system activation

Q1 2021

- Official website presentation
- Bounty campaign
- XXP token ICO
- 1st stage of the trading platform development
- Launch of the investment platform beta version
- Release of the mobile application for Android
- Listing on the crypto exchange
- Participation in TOKEN2049 – The Premier Crypto Event In Asia

Q2 2021

- 2nd stage of the trading platform development
- Investment platform release
- Appearance on Coingecko
- Launch of analytical service
- Participation in Blockchain Life 2021 Forum
- Marketing campaign targeting the Asian region
- Listing on the crypto exchange
- Appearance on Coinmarketcap

Q3 2021

- 3rd stage of the trading platform development
- Participation in Singapore Blockchain Week 2021 (VC)
- Website update
- Release of the mobile application for iOS
- Marketing campaign targeting Latin America and Spanish-speaking users
- Participation in Malta Blockchain Summit 2021 (Brazil)

Q4 2021

- 4th stage of the trading platform development
- Investment platform update
- Marketing campaign targeting the North American market
- Participation in Blockchain Expo – North America 2021
- Listing on the crypto exchange
- Participation in Hackathon Human DeFi Hæk (VC)
- Generation of the Roadmap for 2022

Q1 2022

- 5th stage of the trading platform development
- Deflationary mechanism activation

Platform
